Lecture 1 Lab

Description

In this lab you will create a web page, upload your files to a web server, and explore HTML elements.

Part 1

1. Download today's lab files from http://www.webdesigndecal.com/ under Lectures > Lecture 1.
2. Unzip the files and open "index.html" inside the "work files" folder.
3. Also open "screenshot.jpg," an example of what you should see once your web page is complete.

Part 2

1. Notice the sections denoted by <!-- #. … something …-->. These are sections where code has been omitted. You'll need to fill in these sections to complete the lab.
2. Start with <!-- 1. Fill in My Name Here -->. Notice this corresponds to the title that is displayed at the top of your browser when this web page is opened. Replace the contents with your name.
3. Now let's look at <!-- 2. Fill in something here -->. Here, we're inside a table and need to fill out our answers to the categories listed above. Mimicking the structure of the categories above, create another row and write your answer in separate columns.
4. Now we need to create a list at <!-- 3. Fill in something here -->. The list object has actually already been created for us. All we have to do is create entries. Fill in the list with a few entries.
5. Let's add some images! Open Google and find an image of anything you like. Download it to your computer by right-clicking it and selecting "save image as." Then drag the image to the folder containing "index.html". Also make note of the URL to the image. Replace <!-- 4.Fill in something here --> and <!-- 5. Fill in something here --> with the image's relative and absolute URL respectively.
6. Look to your left and right and introduce yourself to your neighbors. Then write a short paragraph about each person where it says <!-- 6. Fill in something here --> and <!-- 7.Fill in something here -->. Make sure the text is properly marked as paragraphs.

Part 3

1. We're almost done, let's upload our files on the website.
2. Your lab file submission should be visible from the Assignments page.
